

Quality Data

November 2011

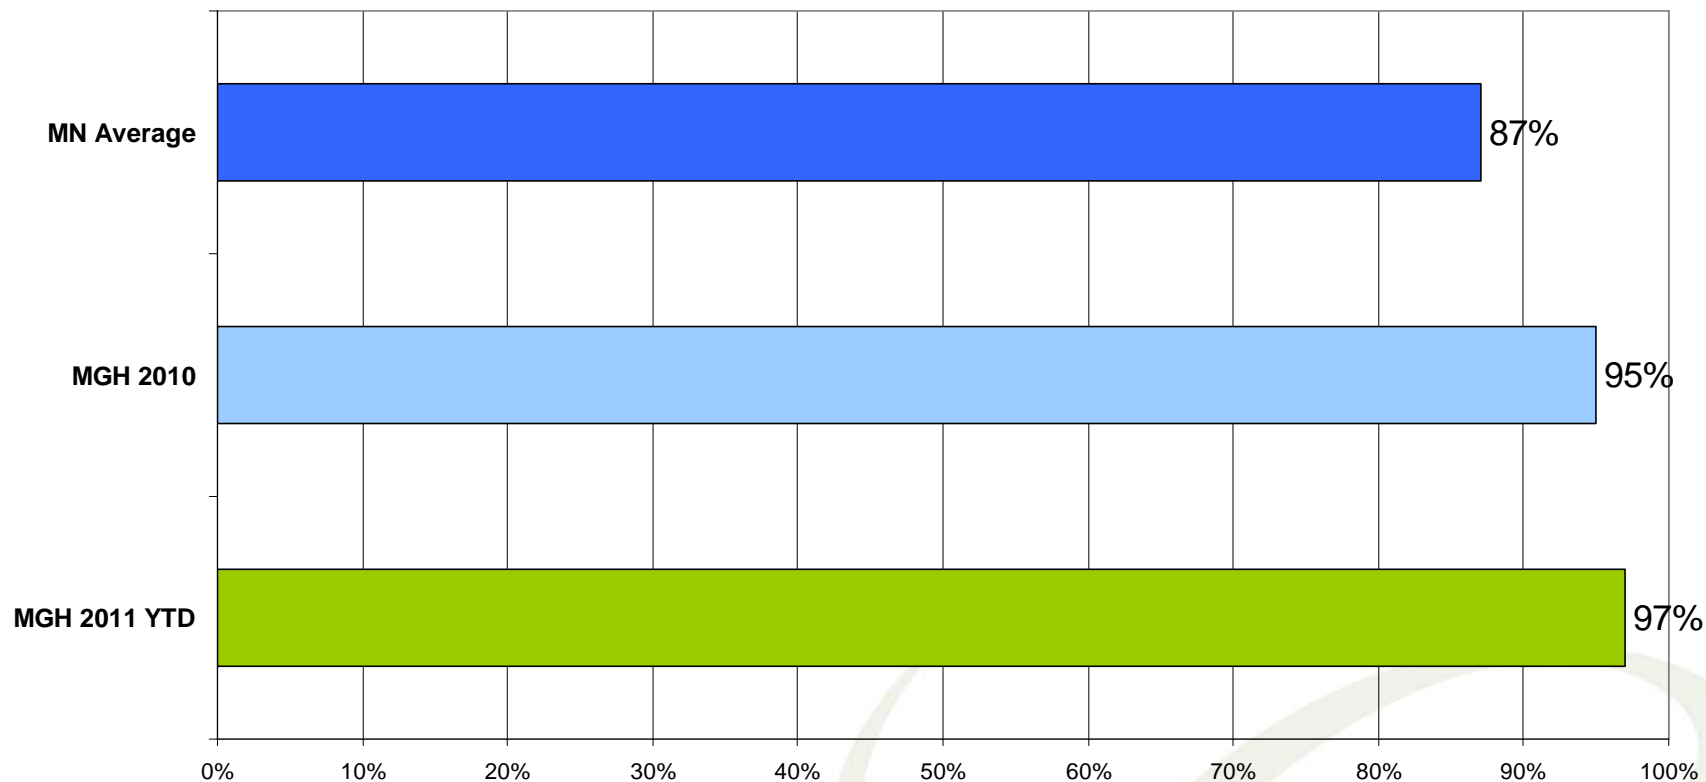

A partnership of North Memorial and Fairview

Pneumonia Process of Care Measures

- Pneumonia is a serious lung infection that causes difficulty breathing, fever, cough and fatigue.
- Maple Grove Hospital follows specific measures to ensure that all pneumonia patients are treated with best practice care.
- Visit www.hospitalcompare.hhs.gov or <http://www.mnhospitalquality.org/> to compare other hospitals nationally and locally.

Pneumonia Best Practice Care Measures

The percentage of patients receiving all of the appropriate care that they should have received based on their clinical condition.

MN Data represents Oct 2009 - Sept 2010

MGH 2010 Data January - December

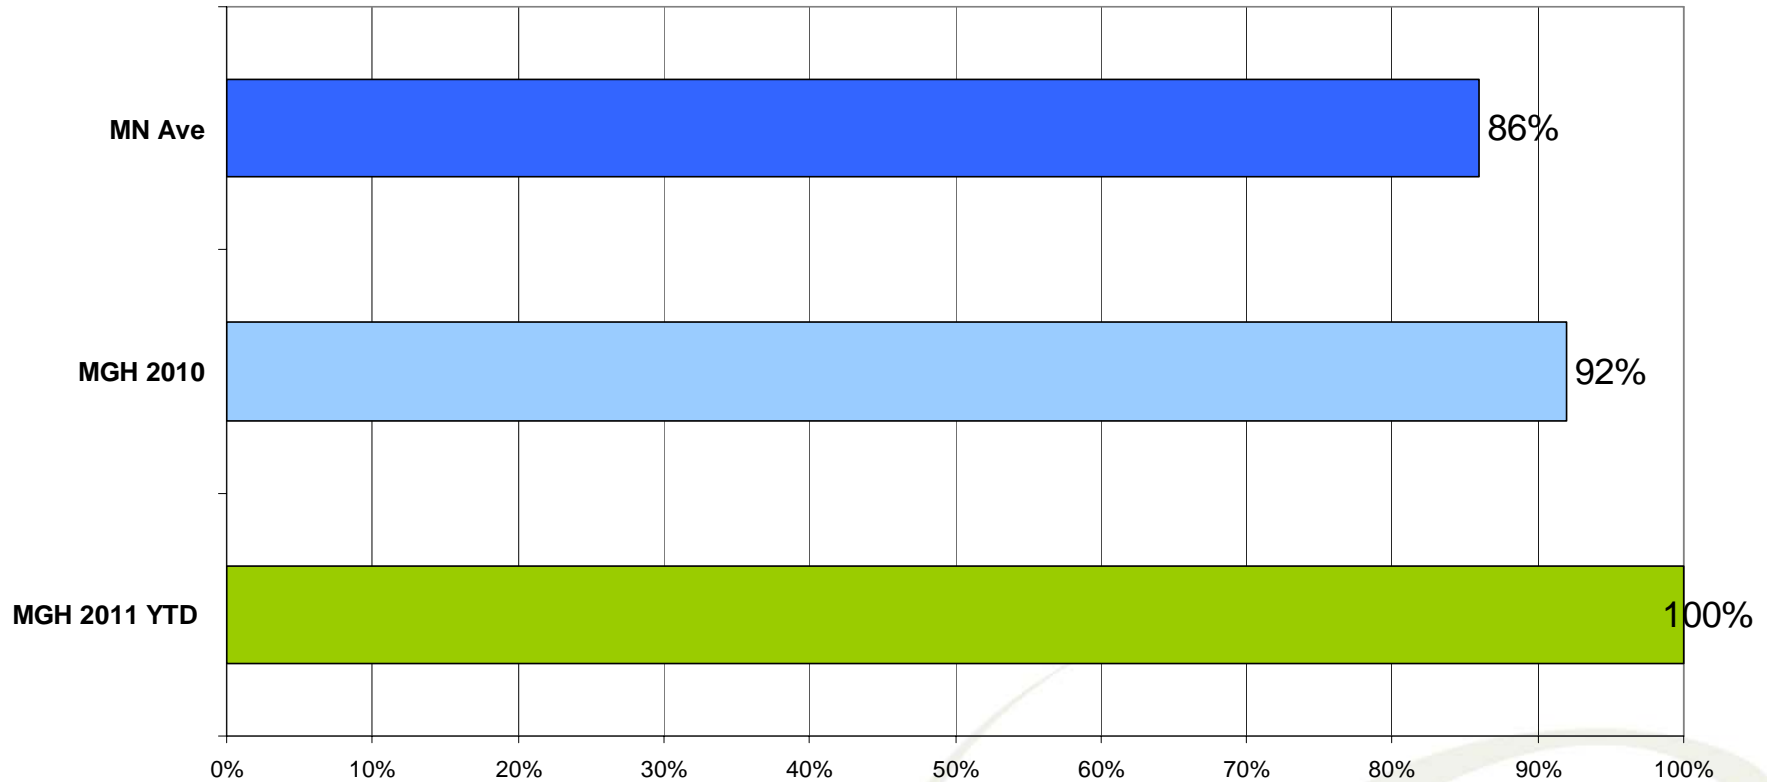

MGH YTD Data is January through October 2011, October data is incomplete.

Heart Failure Care Measures

- Heart Failure is a weakening of the heart's pumping power. With heart failure, your body doesn't get enough oxygen and nutrients to meet its needs.
- Maple Grove Hospital follows specific measures to ensure that all heart failure patients are treated with best practice and safe care.
- Visit www.hospitalcompare.hhs.gov or <http://www.mnhospitalquality.org/> to compare other hospitals nationally and locally.

Heart Failure Best Practice Care Measures

The percentage of patients receiving all of the appropriate care that they should have received based on their clinical condition.

MN Data represents Oct 2009 - Sept 2010

MGH 2010 Data January - December

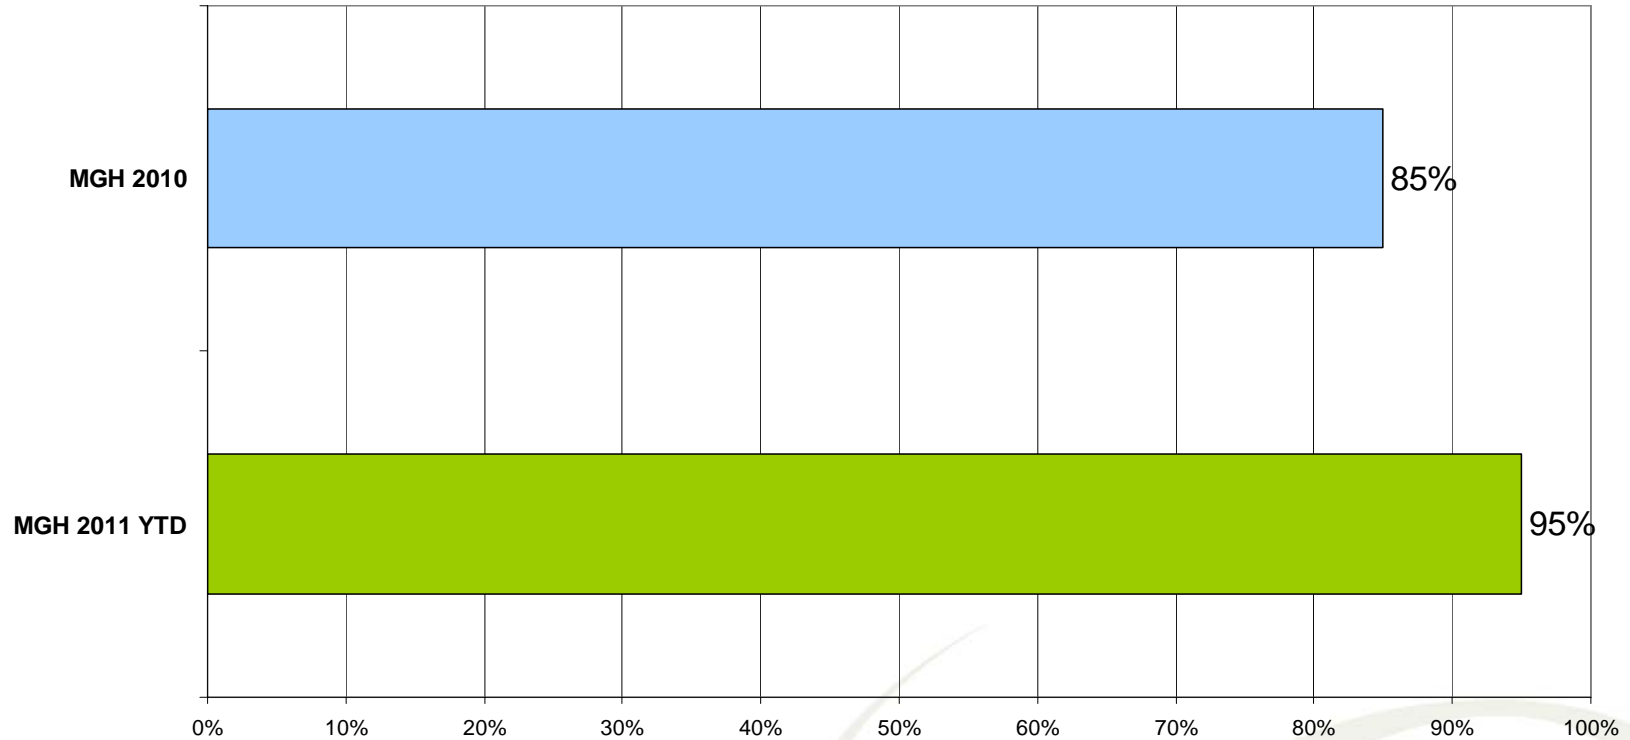

MGH YTD Data is January through October 2011, October data is incomplete

Surgical Care Improvement Project

- Hospitals can reduce the risk of infection after surgery by making sure they provide care that's known to get the best results for most patients. Here are some examples:
 - Giving the recommended antibiotics at the right time before surgery
 - Stopping the antibiotics within the right timeframe after surgery
 - Maintaining the patient's temperature
 - Removing catheters that are used to drain the bladder in a timely manner after surgery.
- Hospitals can also reduce the risk of cardiac problems associated with surgery by:
 - Making sure that certain prescription drugs are continued in the time before, during, and just after the surgery. This includes drugs used to control heart rhythms and blood pressure.
 - Giving drugs that prevent blood clots and using other methods such as special stockings that increase circulation in the legs.
- Visit www.hospitalcompare.hhs.gov or <http://www.mnhospitalquality.org/> to compare other hospitals nationally and locally.

Surgical Care Improvement Project

The percentage of patients receiving all of the appropriate care that they should have received based on their clinical condition.

No "All Measures Met" Data available for SCIP. Specific Measure scores available at <http://www.mnhospitalquality.org>
MGH 2010 Data January - December
MGH YTD Data is January through November 2011 (November data incomplete)
